

Accessing Course Content

The Course Content tool is used to store course content such as the course syllabus, lecture notes, and other course material.

Course content can be distributed in numerous formats. For example, when you select a content link, adobe reader may open to display the content.

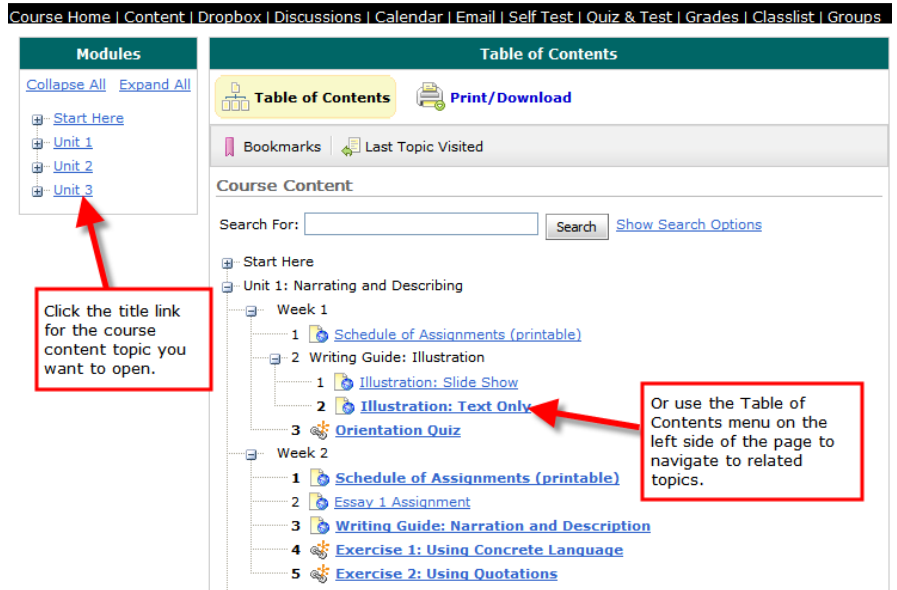

Note: Your instructor may have defined a specific learning path for your course. If this is the case, some content areas will only be available to you once you have completed prerequisite sections or assignments.

1. View course content by clicking the Course Content link on your Course Home navigation bar.

2. From the Course Content page, click the title link for the course content topic you want to open. or use the Table of Contents menu on the left side of the page to navigate to related topics.

Note: Content view options will change slightly from course to course.

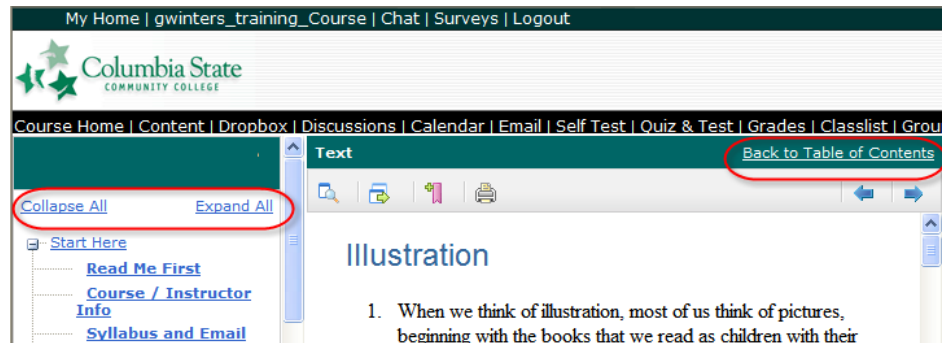

3. Use the tool bar at the top of a Content page to to:

Icon	Description
	Show/Hide the Table of Contents on the left of the screen.
	Open content frame in a separate window.
	Bookmark the current topic so you can come back and view it easily. You can only have one topic per course bookmarked at a time.
	Print the current topic.
	Navigate back and forth between content topics.

4. Use the Collapse All and Expand All to view the hierarchical structure of the content.

5. To get back to the TOC, use the Back to Table of Contents link

To compile content then print or download

When the Table of contents is displayed, the Print / Download button appears which allows the user to select specific items to compile and download.

1. Click the Print / Download button
2. Select the items to compile
3. Click the print or download icon
 - Selecting the print button will display the compiled content in a new window
 - Selecting the download button will create a .zip file so that the user can download the file to the local computer
